

Table S4. Prospective classification of new cohort defeat mice

Mouse	Post-defeat k_threat	Predicted Label	Empirical Score (Δ)	Empirical Label	Correct
n1	1.477	Susceptible	+0.463	Susceptible	Yes
n2	1.156	Susceptible	+0.380	Susceptible	Yes
n3	0.569	Resilient	-0.002	Resilient	Yes

k_threat threshold = 0.883 (derived from original cohort). Empirical susceptibility score = $\Delta t_{shelter} - \Delta t_{investigating}$ (post-defeat minus pre-defeat). Top 2 empirical scores $\rightarrow$ Susceptible; bottom 1 $\rightarrow$ Resilient. Library coverage note: n2's k_threat confirmed by direct optimisation (> 0.883).
